About Us

Bergmed International pride itself to be a company giving utmost assurance towards achieving our customer's trust. For us customer satisfaction comes first before any other desired organizational goals for which companies strive hard to accomplish.

BERGMED INTL since formed we have witnessed rapid but consistent growth in our customer base and business volumes. We pride ourselves to be a reliable brand name having presence in three continents across the world. This has been achieved through our committed efforts to serve the requirements of our customers in best possible manner.

Through collaboration with surgeons, clinical technicians and nurses around the world, we identify surgical needs and advance them into effective and safe products.

Special or Custom Designed Instruments

Bergmed International welcome the opportunity to manufacture instruments that are currently available, but are desired in an alternative tip/-handle selection or belong to special school of pattern. We produce custom designed instruments on your request as well. Please send us an actual sample and/or a detailed written description that includes all dimensions and measurements.

Bergmed Dental Group Guarantee

Any product that fails within the expected lifetime of an instrument as a result of material defect or poor workmanship will be repaired or replaced at no charge. As a service, we also offer sharpening, repair or reworking of instruments. The **Bergmed International** customer service will be pleased to support and consult you in this regard.

We cannot be held responsible for the performance or replacement of any instrument that has been tampered with, modified or refitted in any manner.

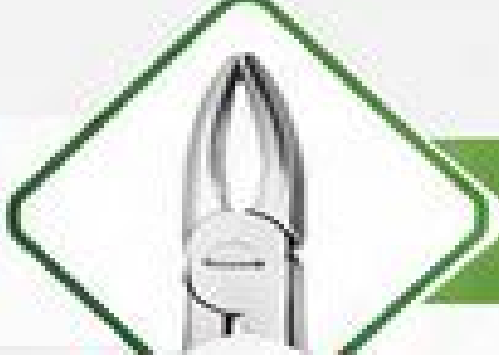

How to Place an Order

Instruments can only be ordered through our authorized dealer. Your surgical dealer will take your order and ship the products to you. If you have questions prior to placing an order or if you would like to place an order for any of our products, please contact us at info@bergmed.com

HANDLES FOR ROOT ELEVATORS

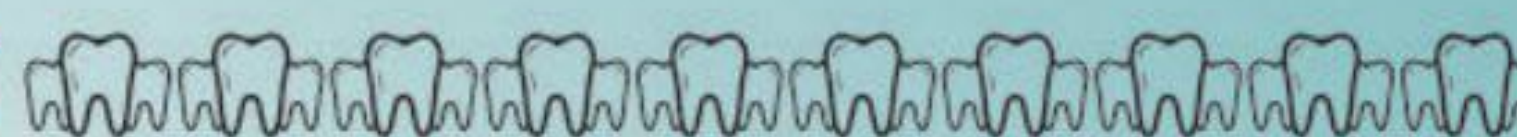

Elevators Classification

I-According to use:

- 1-Elevators designed to remove the entire tooth, straight elevators, hospital pattern and winter elevator
- 2-Elevators designed to remove roots broken off at the gingival line e.g. Apexo elevator, Coupland and lido lavien elevators
- 3-Elevators designed to remove roots broken off half way to the apex e.g. curved elevator hospital pattern, winter elevator and Apexo elevator

Functions and Features:

- Scissors designed for suture removal.
- Blades – one has a curved edge and one has a notched edge.
- During suture removal, suture is scooped up by blade with the notched end before cutting to prevent tissue trauma.

Scissors Tungsten Carbide

Tungsten Carbide scissors feature cutting edges of permanently welded Tungsten carbide inside. These Scissors will retain a fine sharp cutting edge for long time and will outlast any standard stainless steel dental scissors. Both handles are gold-plated for easy identification.

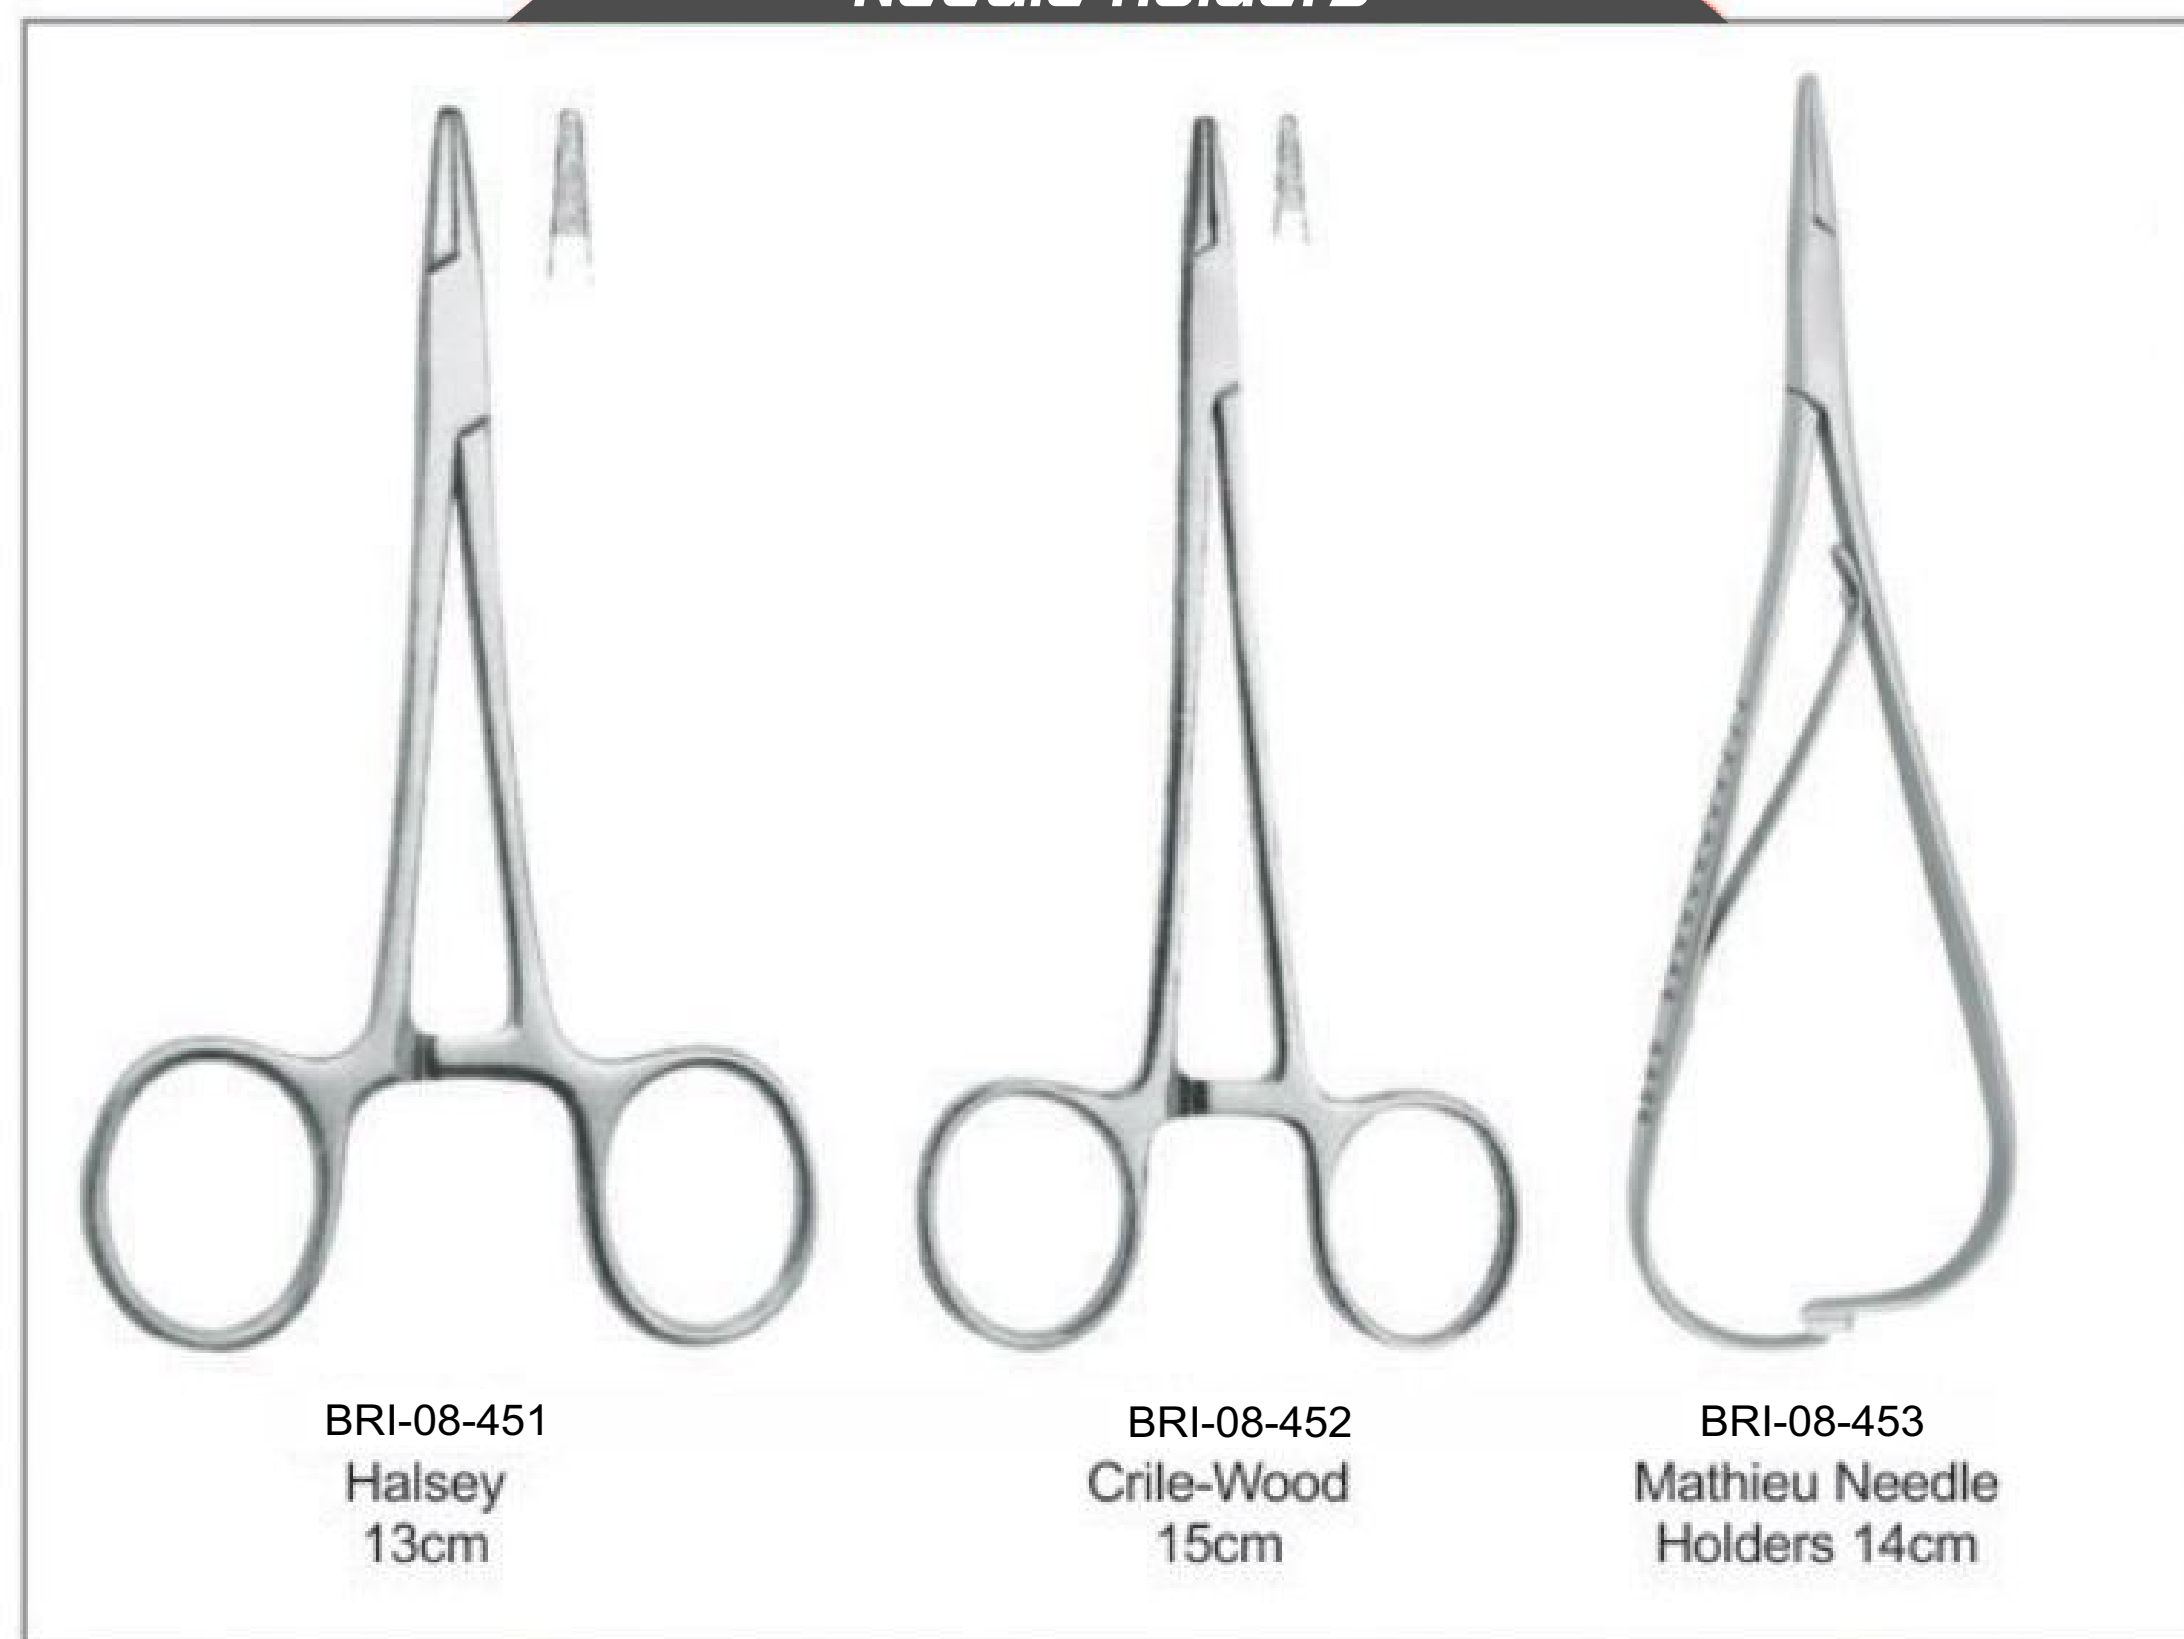

Needle holders feature tungsten carbide inserts with a matched diamond-cut pyramidal profile for enhanced longevity, a secure, positive suture needle grasp and reduced risk of cutting the suture material. With a precision designed hinge, the smooth surface reduces the risk of catching and or cutting the suture material during the knot tying process, enhancing clinical efficiencies. For optimal grip and control, offers a variety of design options, including standard, finger and palm controlled closure.

Langer Currettes

Barnhart

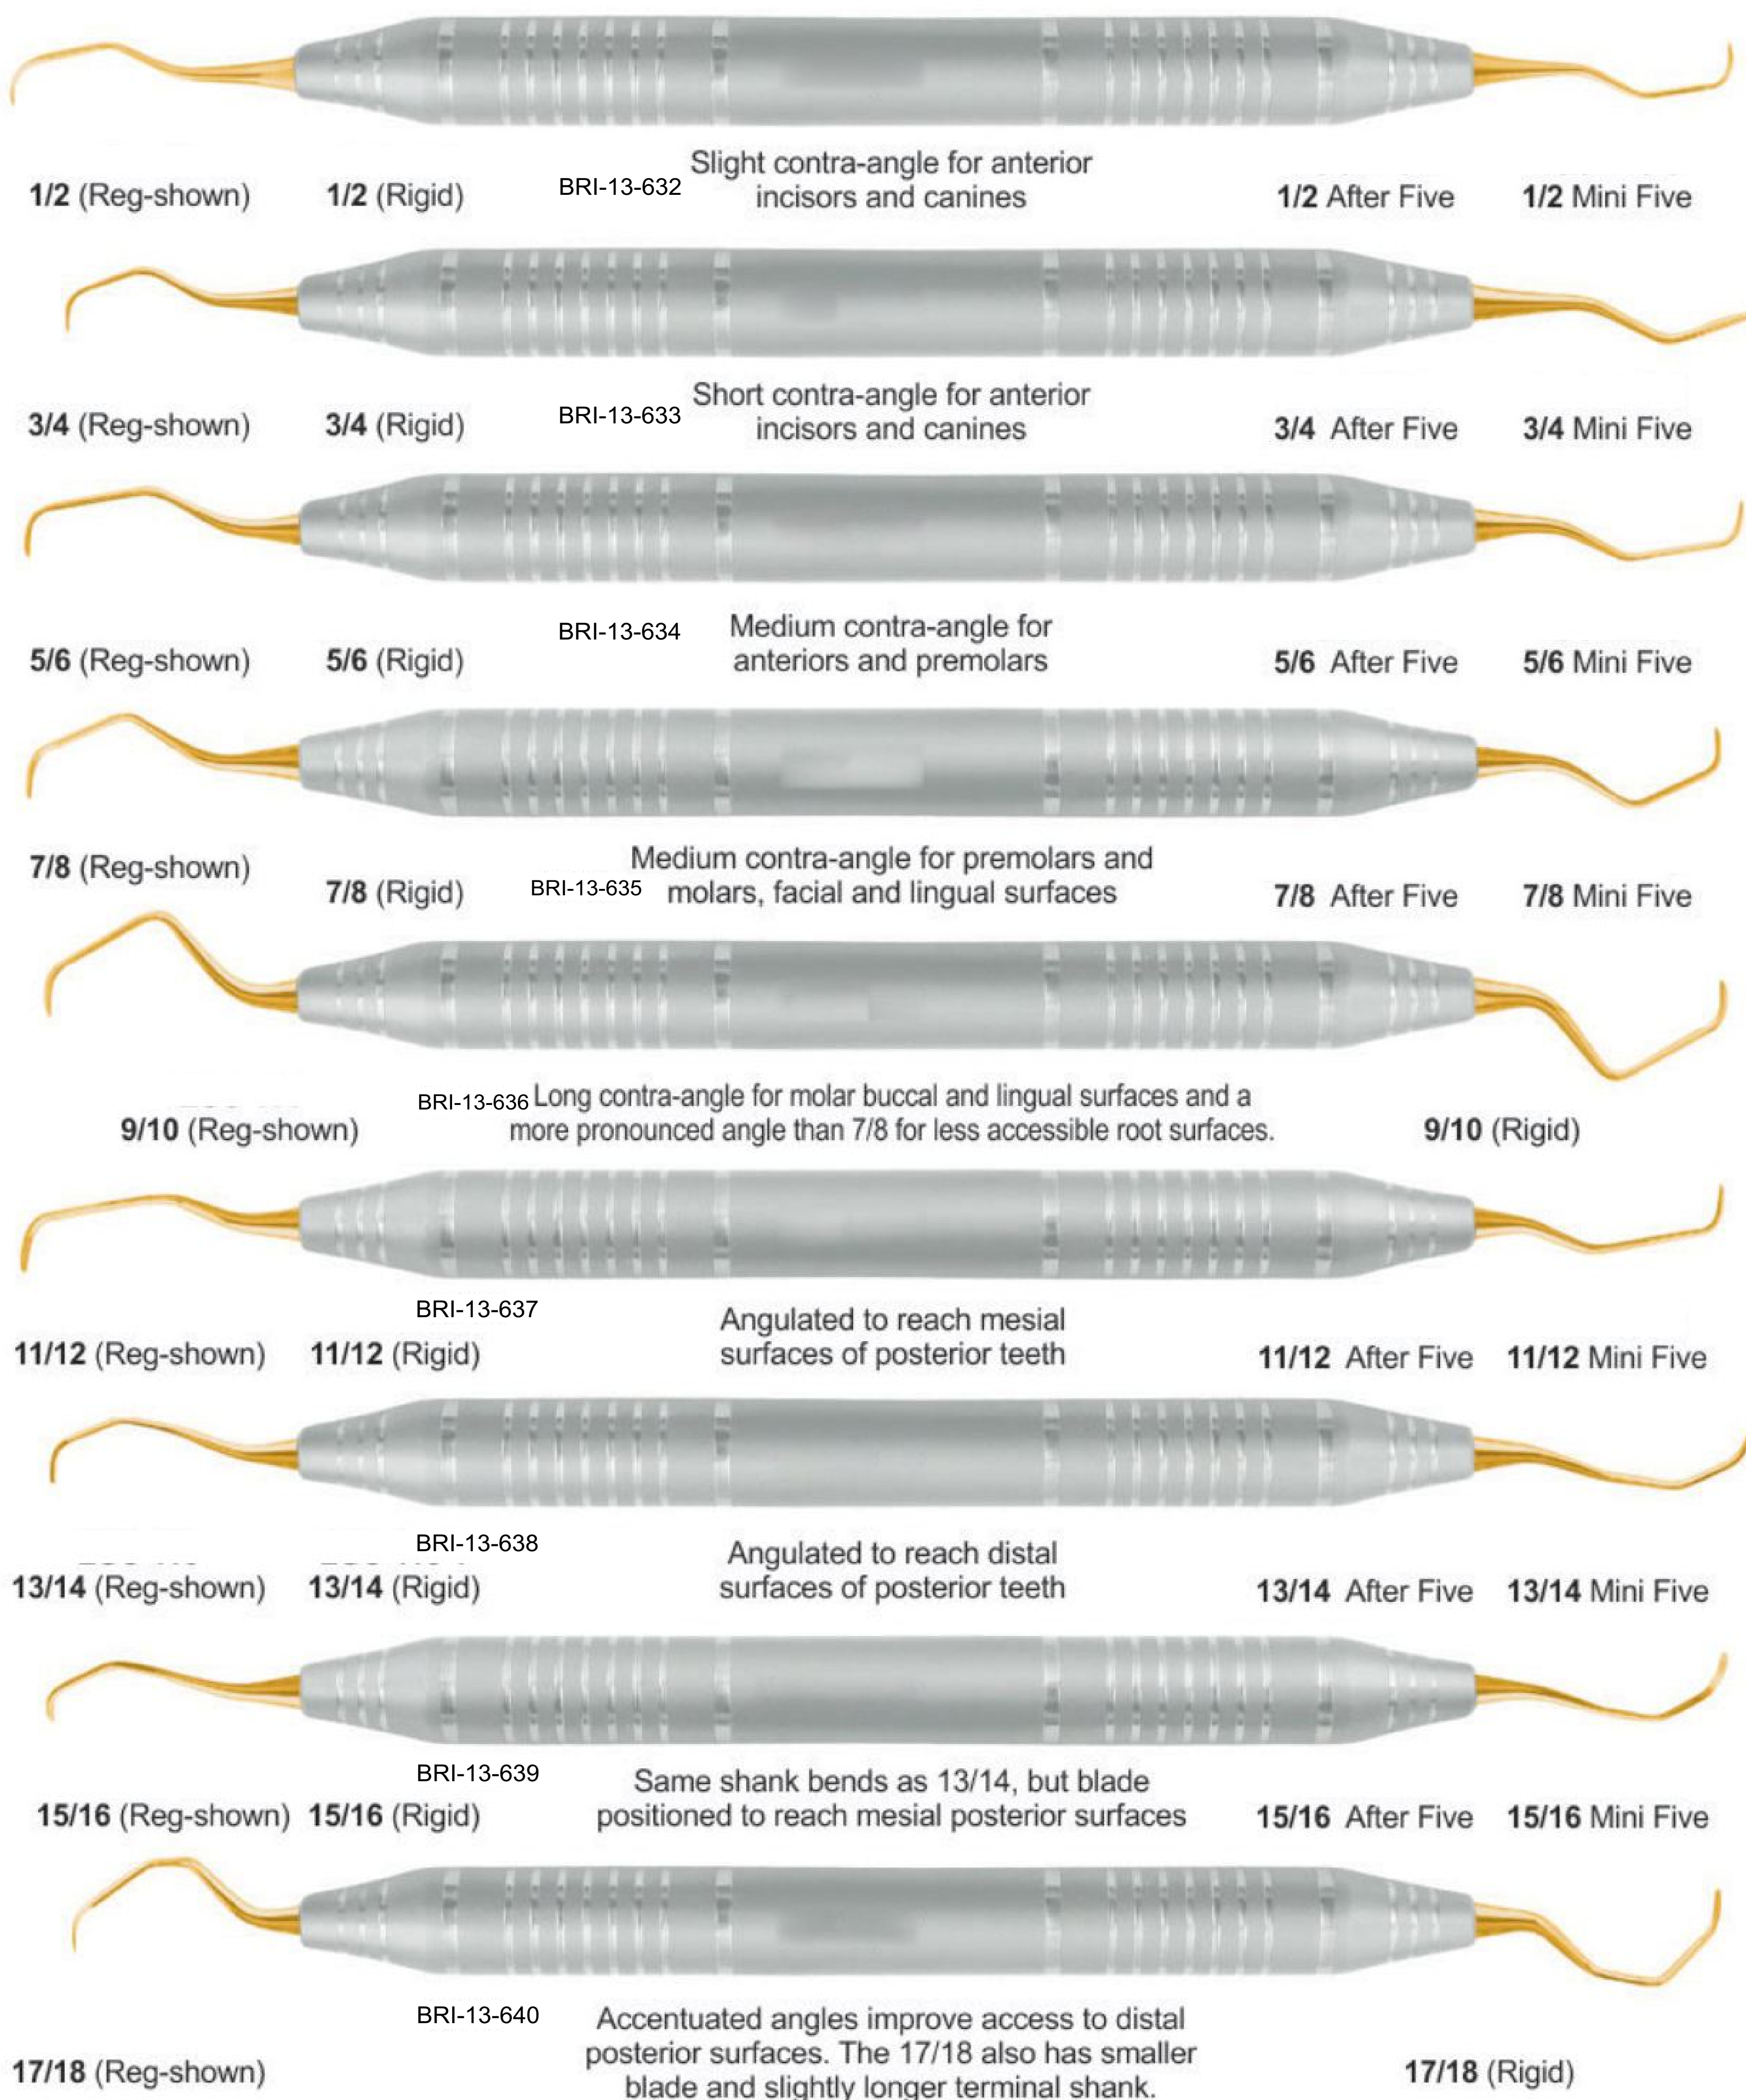

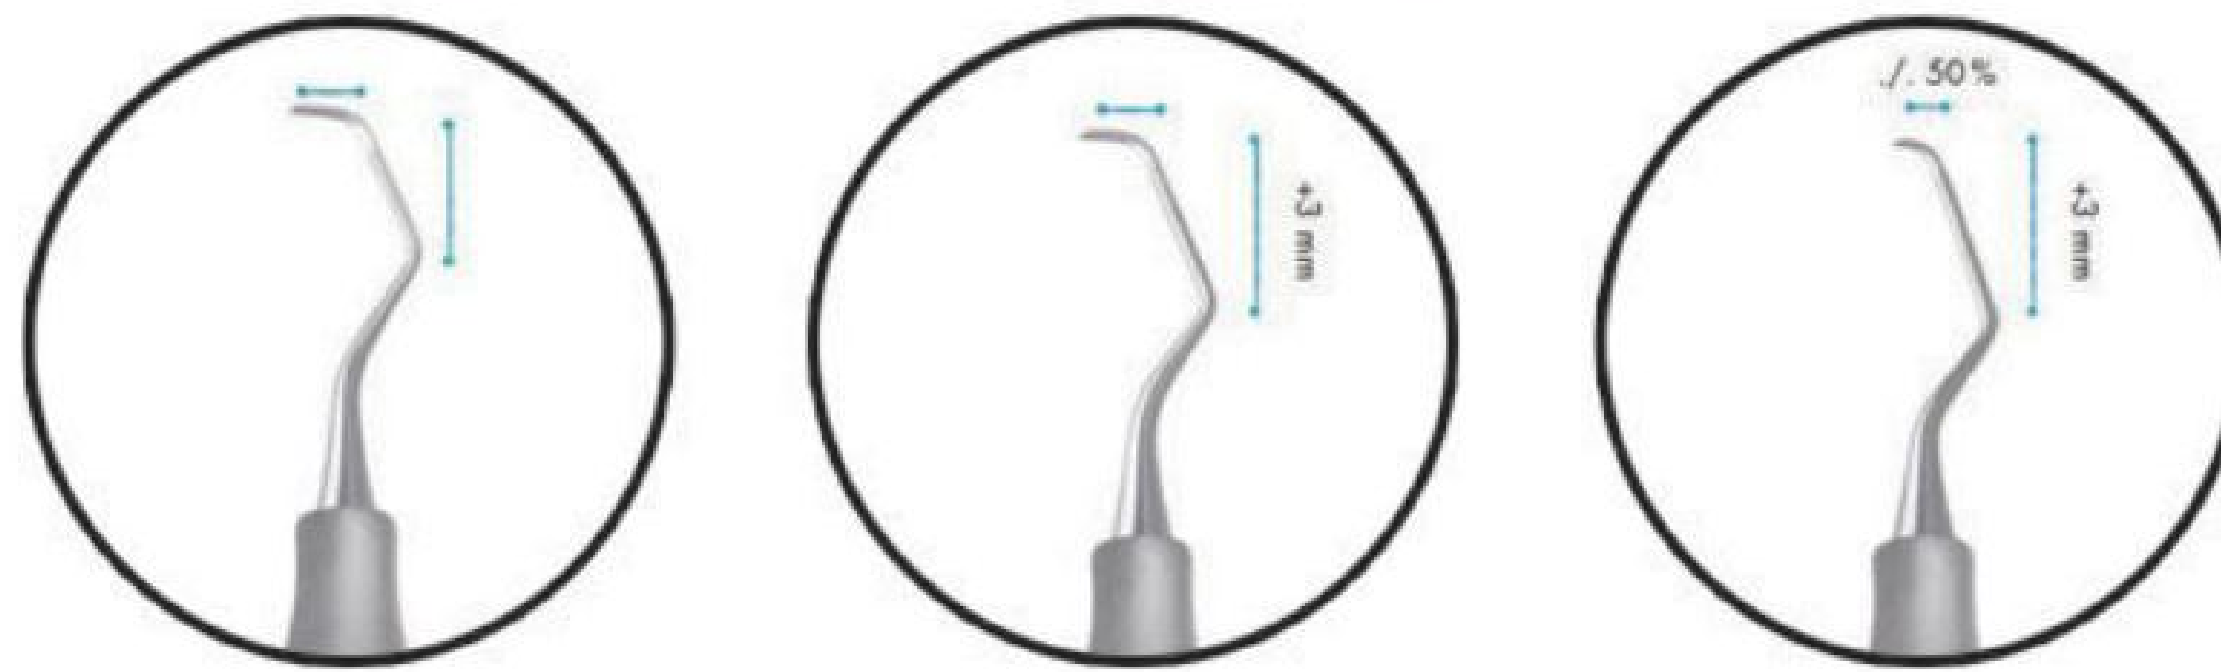

Periodontal Files

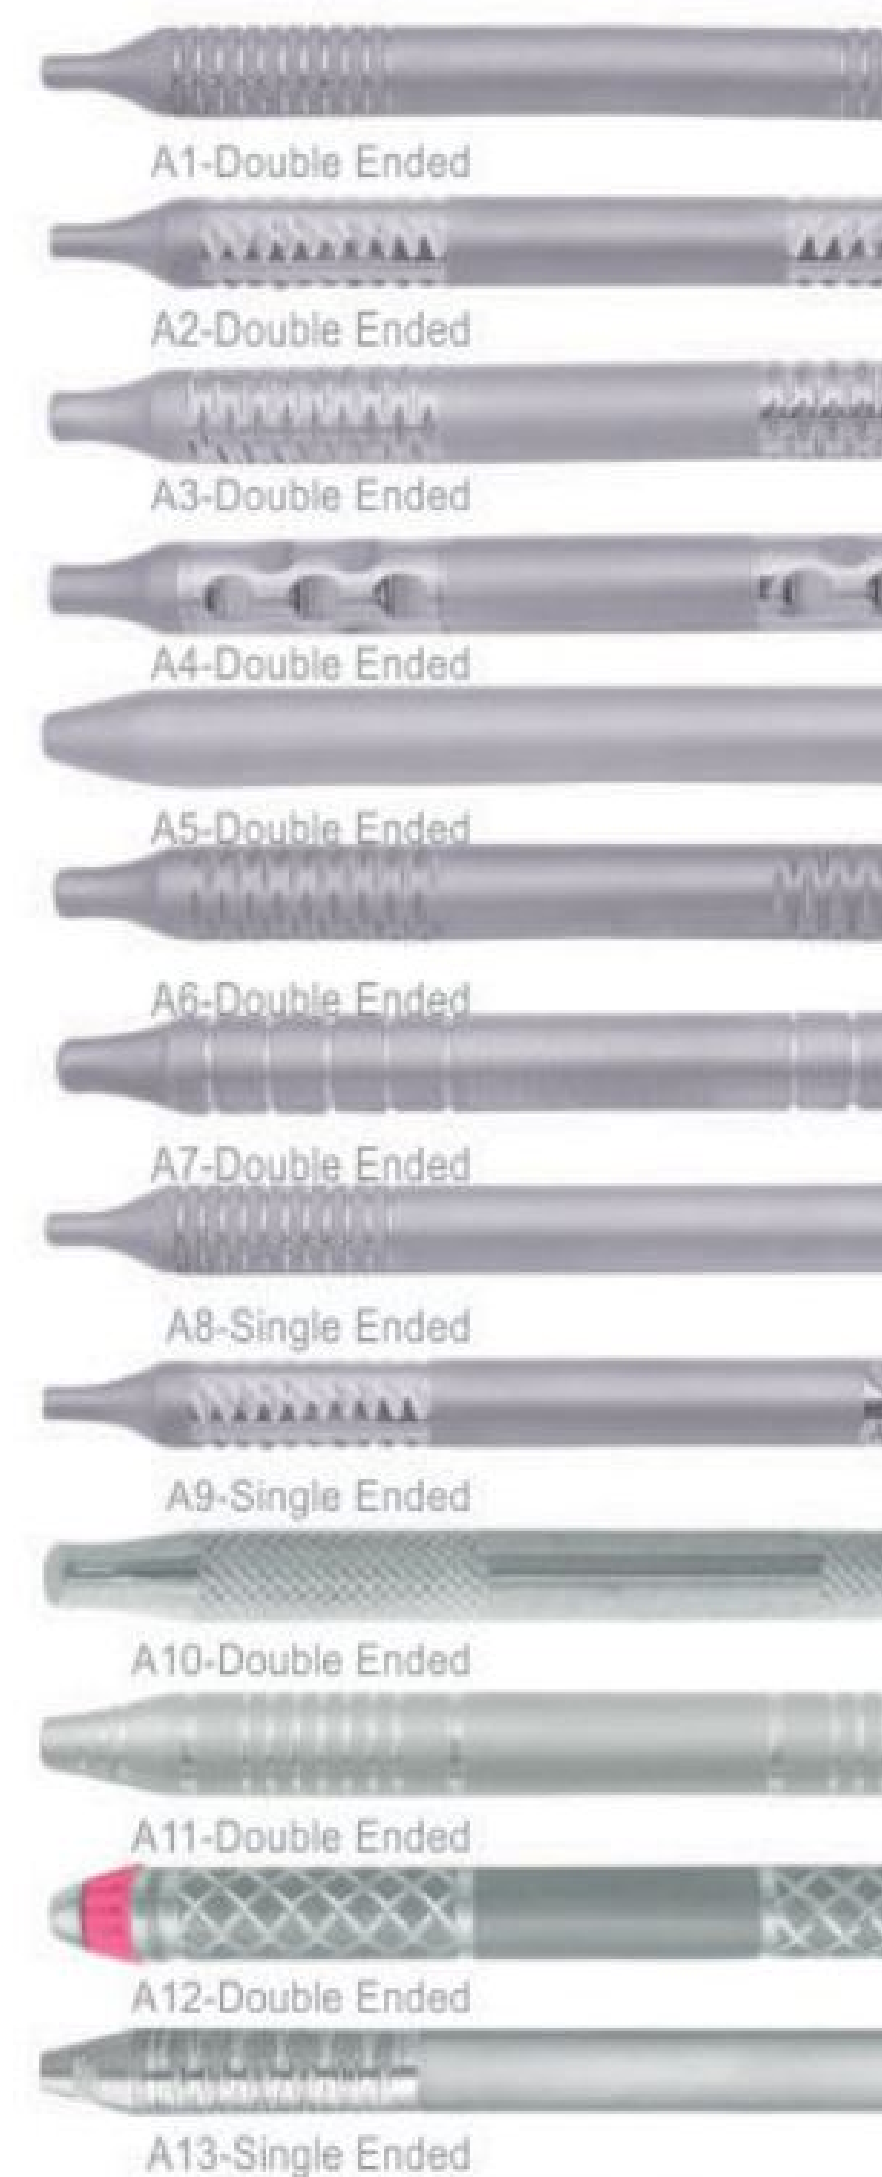

- Area-specific to allow for deep scaling, root planing and periodontal debridement
- Offset blade provides a perfect working angulation for the tooth surface
- Offset blade angulation means only the lower cutting edge of each blade is used

Bracket Positioning Boons Gauge

- It Is The Most Frequently Used Bracket Positioning Aid.
- It Is Made Of Stainless Steel.
- It Accurately Measures Height Of Bracket Placement From The Incisal Edge At 3.5, 4, 4.5 And 5mm.
- Flat Surface Rests On Incisal/occlusal Surface Of Tooth. Simplifies Seating The Bracket On The Teeth With Exactly The Right Distance Between Bracket Dot And Incisal Edge With Pencil Lid Or Metal Tips.

Uses of Articulator

Primary purpose:

- 1) To hold opposing casts in a predetermined fixed relationship
- 2) To open and close. 3) To produce border and inter- border diagnostic sliding motions of the teeth similar to these in the mouth.

Technical Datas:

Intercondylar distance 120 mm. / condylar inclination fixed at 30°
Bennet angle fixed at 7° / Incisal table inclination 10°
Distance between mounting plates 85 mm. / Weight 400 gr.
Opening 180°
